Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is an Examiner's Statement of Reasons for Allowance:

In interpreting the claims, in light of the specification and the applicants' arguments, the examiner finds the claimed invention to be patentably distinct from the prior art of record.

The prior art of record teaches a network communications system having a network element 600 comprising various shelf elements including a network management interface card (NMIC) 632, shelf controllers 622/624 and network interface card 626.

However, the prior art of record fails to teach or suggest individually or in combination a first card coupled to a plurality of host processor cards and coupled to a payload LAN, and a second card coupled to the plurality of host processor cards and coupled to a management LAN. The prior art teaches separate cards for performing specific functions designated, however, the prior art fails to teach the payload load communications and network management communications being separated onto a payload LAN and a management LAN.

The examiner finds the applicants' arguments on page 7, lines 20-27 of the Appeal Brief filed March 23, 2006 to be persuasive. The applicants argued in substance that O'Leary failed to teach segregating management LAN and payload LAN communications; that all network communications taught in O'Leary will be commingled on one network. Upon further consideration, the examiner agrees with the applicants.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
